TECHNICAL SKILLS

Languages: C++ [Intermediate], Python [Intermediate], Java [Basic]

Frontend: React.js, Tailwind CSS, Framer motion, HTML5, CSS3

Backend: Node.js, Express.js, JWT Authentication, OAuth 2.0

Databases: MongoDB , SQL

Tools / Frameworks / Libraries / Version Control / Operating Systems / API Technologies: Git, GitHub, Google Cloud Console, Render, Google OAuth 2.0, VS Code, Postman, Linux

PERSONAL STATEMENT

Full-Stack Developer experienced in building and deploying MERN applications with authentication and cloud technologies. Seeking backend or full-stack internships to deepen expertise in scalable software systems.

MedAgency | [GitHub Repo Link](#)

Apr 2026 – May 2026

- **Stack:** MongoDB, Express.js, React.js, Node.js, JWT Authentication, Axios, React Router, Render, Git
 - Built and deployed a wholesale medical catalogue platform for a live medical distribution business, currently supporting 5+ active users in accessing medicine information and agency contact details online.
 - Developed a dual-role system where agency owners manage medicine inventory and pricing while customers view product listings and contact the agency directly for inquiries.
 - Implemented JWT-based authentication and protected routes to provide secure access control and session persistence across the application.
 - Enabled customers to access medicine availability online and connect directly with the agency, improving product visibility through a centralized platform.
-

RouteX | [GitHub Repo Link](#) |

Apr 2026 – May 2026

- **Stack:** MongoDB, Express.js, React.js, Node.js, Tailwind CSS, Framer Motion, Google OAuth 2.0, Google Cloud Console, JWT, Axios, Render, Git
- Developed a full-stack travel booking application that enables users to search, select, and book bus, train, and flight tickets through a unified platform.
- Implemented Google OAuth 2.0 Sign-In alongside email/password authentication, with JWT-based authorization and protected routes for secure user access.
- Built interactive booking workflows including route search, seat selection, coupon application, payment simulation, and ticket generation with unique PNR references.
- Designed responsive and user-friendly interfaces with animated transitions and real-time seat layouts, delivering a seamless booking experience across devices.

EDUCATION ENROLLMENT

Kalvium’s UG program in CS (Software Product Engineering)2024-2028

Campus: Krishnankoil ,Tamilnadu | Bachelor’s enrollment: Kalasalingam Academy of Research and Education

ACHIEVEMENTS & EXTRACURRICULARS

- **Hackathons & Competitions:** Secured 1st place among 50+ competing teams at the BIT Season 2 Web Development Hackathon by engineering and shipping a full-stack MERN application within a 48-hour sprint.
- **Technical Contributions:** Solved 150+ Data Structures and Algorithms problems on LeetCode using C++ and Python across Arrays, Linked Lists, Trees, Dynamic Programming, and Graph problems through consistent practice.
- **Campus Engagement / Leadership:** Coordinated a 3-member development team across 2 sprint cycles, supporting project planning, collaboration, and timely feature delivery.
